Dashboard Design Documentation

The dashboard uses a structured layout with KPI cards and supporting visuals. Consistent alignment and color usage improve readability and user experience.

 Dashboard Design & KPI Documentation

Key Insights

Outreach Performance

A large portion of applicants (3,194 out of 5,000) remain not contacted, indicating gaps in follow-up and engagement.

Program Demand

Technology-focused programs such as Business Analytics and Computer Science attract the highest number of applicants, highlighting strong demand for data-driven fields.

Geographic Distribution

India dominates the applicant pool, with Telangana and Hyderabad contributing the highest volumes.

Application Source

Most applicants come from Non–Study Group channels, showing external channels drive applications.

Seasonal Trends

Application activity peaks during Fall and Spring intakes, with a decline after mid-2024, suggesting the need for stronger pre-intake outreach strategies.

Recommendations

- Increase follow-up efforts to engage the large number of uncontacted applicants and improve response and conversion rates.
- Focus admission campaigns on high-demand programs such as Business Analytics and Computer Science.
- Improve data quality by reducing missing geographic information for better regional targeting.
- Strengthen Non–Study Group channels while optimizing Study Group performance.
- Align outreach campaigns with peak intake periods (Fall and Spring) to maximize application volume.

Interactive Dashboard Screenshots

1. Dashboard Overview

Fig 1: Complete Dashboard Overview

This figure shows the overall dashboard layout, including KPIs, charts, and filters used for analyzing recruitment performance.

2. Interactive Filters (Slicers)

Fig 2: Dashboard Filters (Slicers)

The dashboard includes slicers such as Region, Intake and Program Name allowing users to interactively filter the data.

3. Demonstration of Interactivity

Fig 3: Dynamic Filtering in action

The dashboard updates automatically when a filter is applied. In this example, selecting a specific region updates all KPIs and charts accordingly.

4. User Experience

The dashboard is designed to be intuitive and interactive, enabling users to explore data through slicers and dynamic visuals without requiring additional tools or links. All key insights can be derived directly from the dashboard interface.
